

2A Ultra-Low Dropout Voltage LDO Regulators with Soft-Start Evaluation Board Guidance

General Description

The Evaluation Board user guide describes the operational use of the RTQ2522A evaluation board as a reference design for demonstration and evaluation of the RTQ2522A, an ultra-low dropout (LDO) linear regulator with soft-start. Included in this user guide are setup and operating instructions, thermal and layout guidelines, a printed circuit board (PCB) layout, a schematic diagram, and a bill of materials (BOM). For more detail information, please refer to the RTQ2522A datasheet

Performance Specification Summary

Summary of the RTQ2522A Evaluation Board performance specification is provided in Table 1. The ambient temperature is 25°C.

Table 1. RTQ2522A Evaluation Board Performance Specification Summary

Specification	Test Conditions	Min	Typ	Max	Unit
Input Voltage Range		V _{OUT} + V _{drop}	1.1	5.5	V
VBIAS Pin Voltage		2.7	--	5.5	V
Output Voltage Range	V _{IN} = 5V, I _{OUT} = 2A	0.8	0.8	3.6	V
Line Regulation	V _{OUT} (normal) + 0.3V ≤ V _{IN} ≤ 5.5V	--	0.03	--	%/V
Load Regulation	50mA ≤ I _{OUT} ≤ 2A	--	0.09	--	%/A
V_{IN} Dropout Voltage	I _{OUT} = 2A, V _{BIAS} – V _{OUT} (normal) ≥ 3.25V	--	100	150	mV
V_{BIAS} Dropout Voltage	V _{OUT} = 80% × V _{OUT} (normal)	--	1.55	1.8	V

Power-up Procedure

Suggestion Required Equipments

- RTQ2522A Evaluation Board
- DC power supply capable of at least 5.5V and 2A
- Electronic load capable of 2A
- Function Generator
- Oscilloscope

Quick Start Procedures

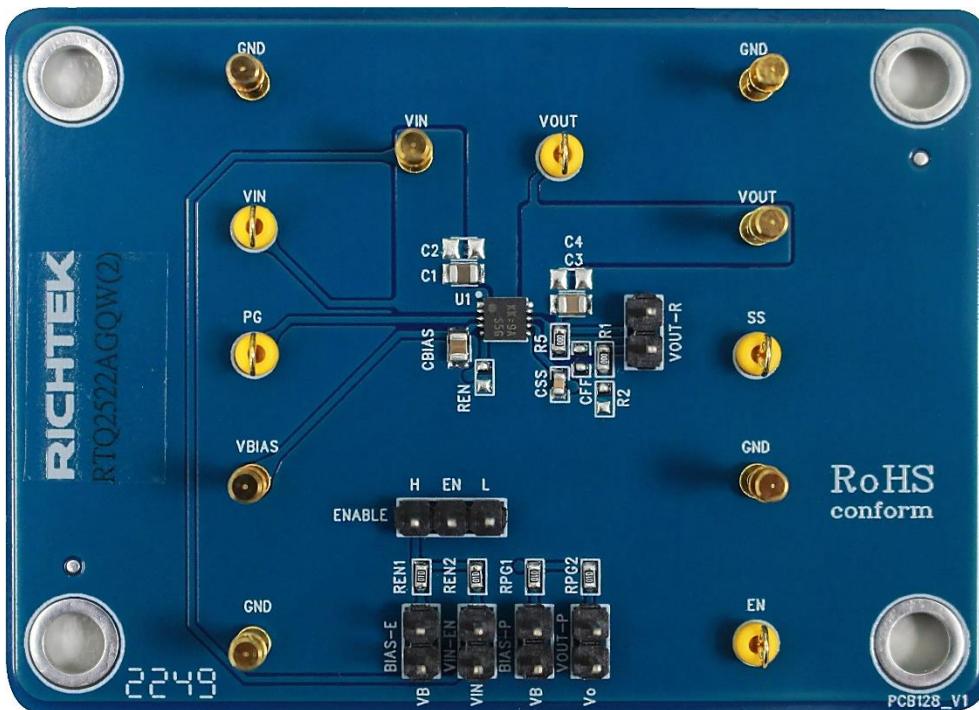

The Evaluation Board is fully assembled and tested. Follow the steps below to verify board operation. Do not turn on supplies until all connections are made. When measuring the output voltage ripple, care must be taken to avoid a long ground lead on the oscilloscope probe. Measure the output voltage ripple by touching the probe tip and groundring directly across the last output capacitor.

Proper measurement equipment setup and follow the procedure below.

- 1) With power off, connect the input power supply to V_{IN} and GND pins.
- 2) With power off, connect the electronic load between the V_{OUT} and nearest GND pins.
- 3) Turn on the power supply at the input. Make sure that the input voltage does not exceed 6V on the Evaluation Board.
- 4) Check for the proper output voltage using a voltmeter.
- 5) Once the proper output voltage is established, adjust the load within the operating ranges and observe the output voltage regulation, quiescent current, dropout voltage, PSRR, noise and other performance.

Detailed Description of Hardware

Headers Description and Placement

Carefully inspect all the components used in the EVB according to the following Bill of Materials table, and then make sure all the components are undamaged and correctly installed. If there is any missing or damaged component, which may occur during transportation, please contact our distributors or e-mail us at eVB_service@richtek.com.

Test Points

The EVB is provided with the test points and pin names listed in the table below.

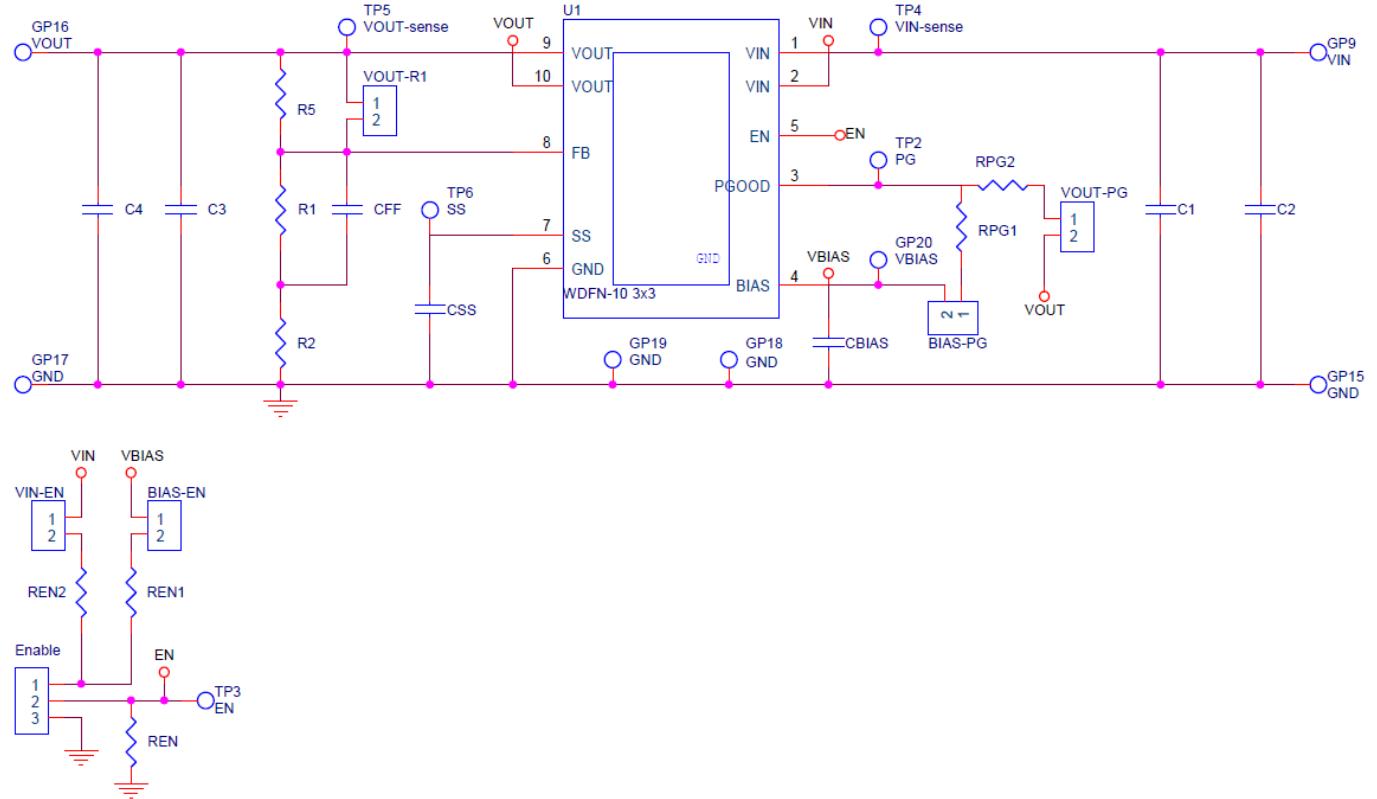

Test Point/ Pin Name	Function
VIN	Supply input pin.
VOUT	Output of the regulator.
PG	Power good sense pin.
VBIAS	Input pin of bias voltage.
EN	Enable sense pin.
GND	System ground pin.
SS	Soft-start capacitor waveform sense pin.
ENABLE	User can decide EN pin connected to high or low.
BIAS-EN/VIN-EN	Decision of EN pin pull-high voltage source.
BIAS-PG/VOUT-PG	Decision of PG pull-high voltage source.

Bill of Materials

V _{IN} = 1.1V to 6.5V, V _{OUT} = 0.8V to 5.5V, I _{OUT} = 2A						
Reference	Count	Part Number	Value	Description	Package	Manufacturer
U1	1	RTQ2522AGQW(2)	RTQ2522A	LDO	WDFN-10L 3x3	RICHTEK
C1	1	TMK212BJ475KG-T	4.7µF	Capacitor, ceramic, 25V, X5R	0805	TAIYO YUDEN
C3	1	GRM21BR71A106KE51L	10µF	Capacitor, ceramic, 10V, X7R	0805	MURATA
CBIAS	1	0805B105K250CT	1µF	Capacitor, ceramic, 25V, X7R	0805	WALSIN
CSS	1	0603B102K500CT	1nF	Capacitor, ceramic, 50V, X7R	0603	WALSIN
R1, R5	2	WR06X000 PTL	0	Resistor, chip	0603	WALSIN
REN1, REN2, RPG1, RPG2	4	WR06X1003FTL	100k	Resistor, chip	0603	WALSIN

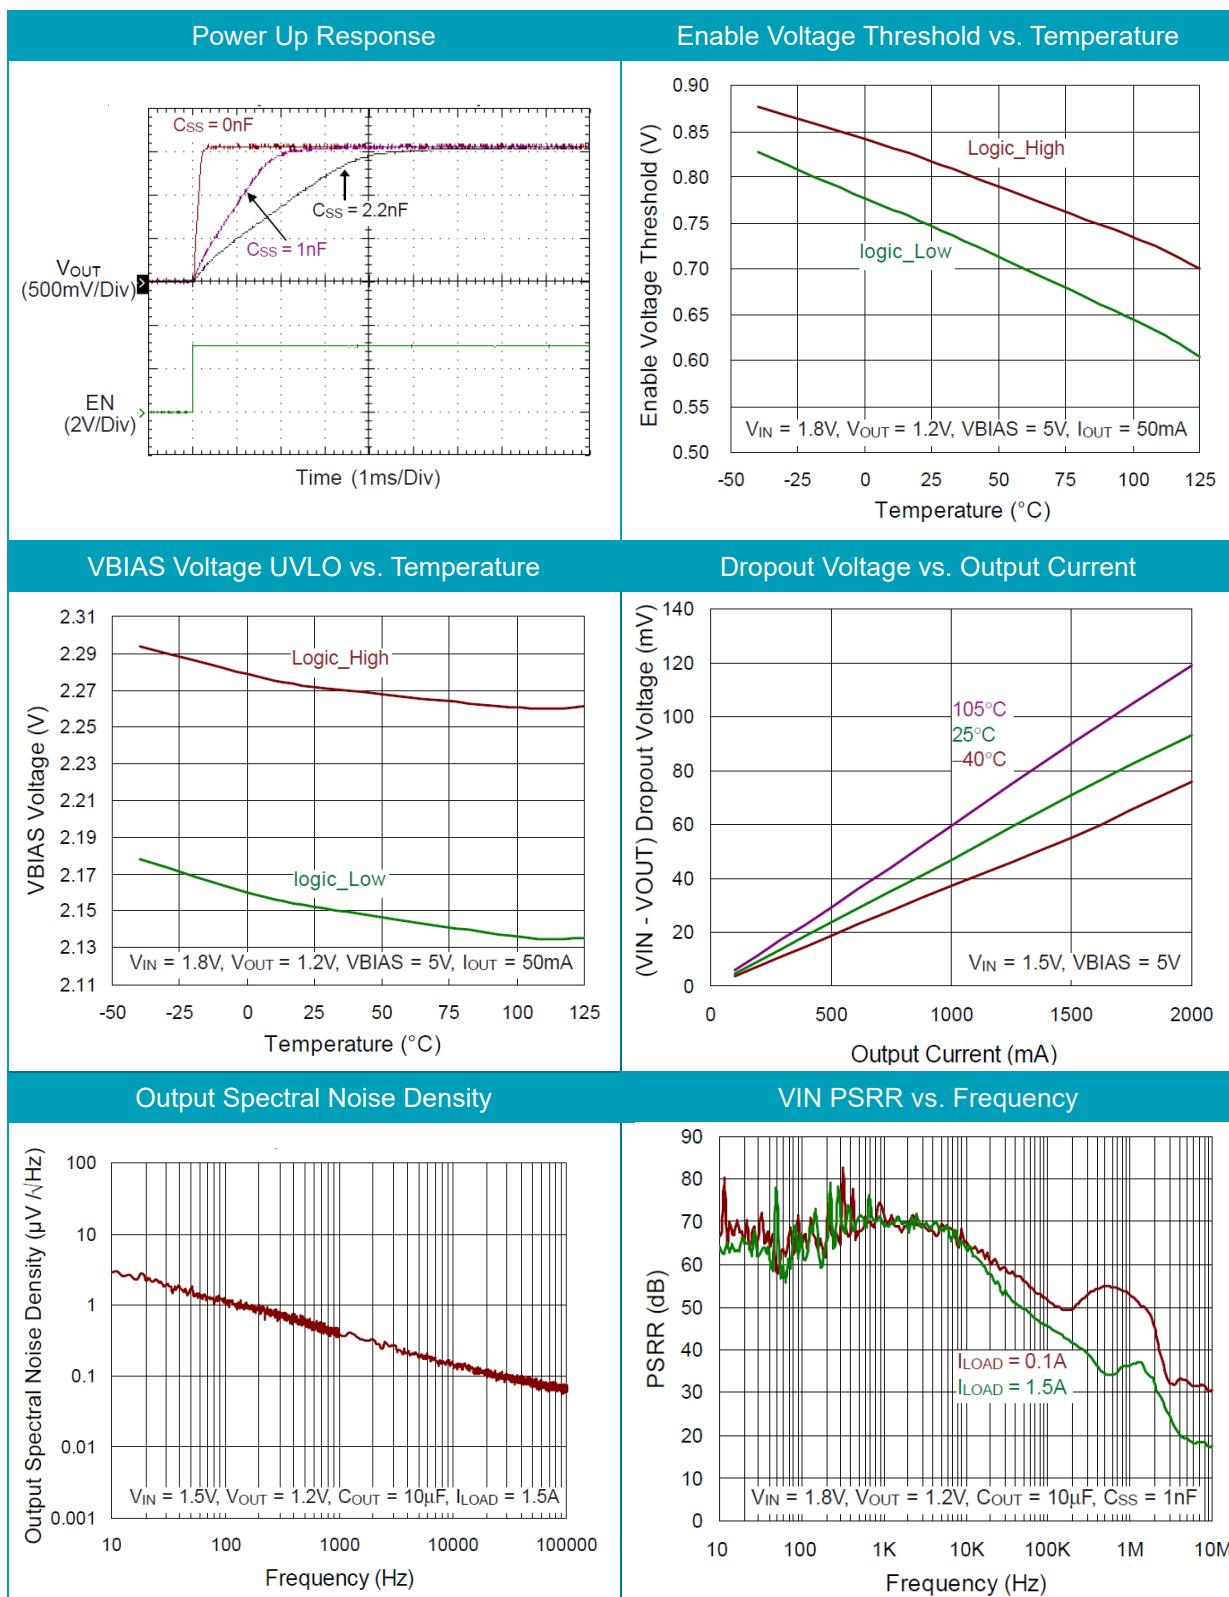

Typical Applications

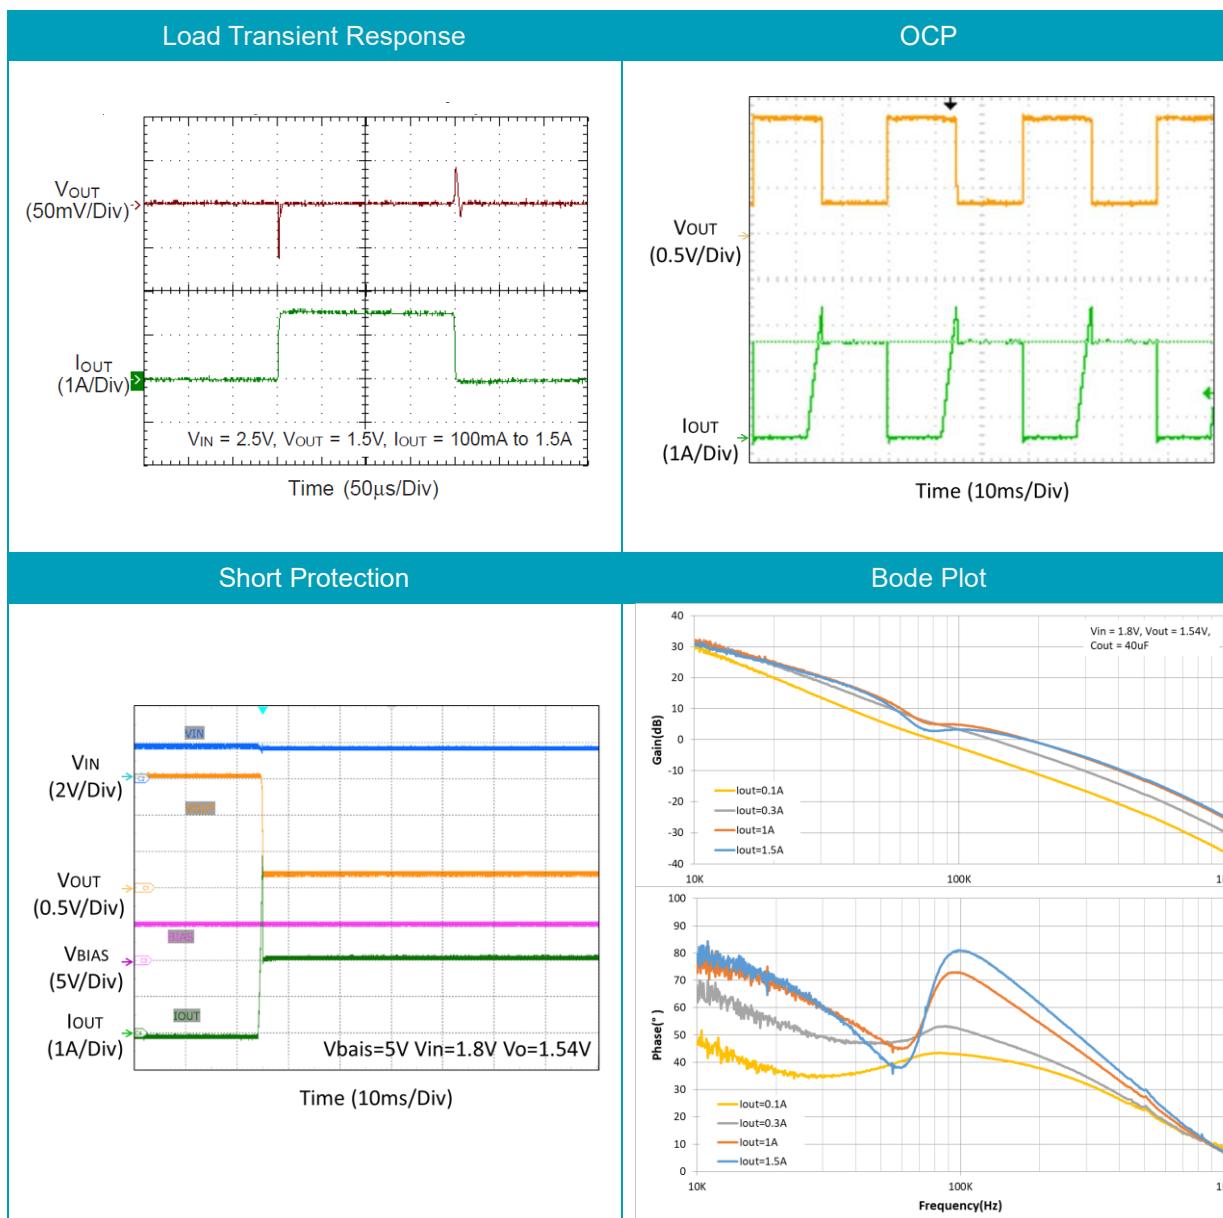

EVB Schematic Diagram

1. The capacitance values of the input and output capacitors will influence the input and output voltage ripple.
2. MLCC capacitors have degrading capacitance at DC bias voltage, and especially smaller size MLCC capacitors will have much lower capacitance.

Measure Result

Note: When measuring the input or output voltage ripple, care must be taken to avoid a long ground lead on the oscilloscope probe. Measure the output voltage ripple by touching the probe tip directly across the output capacitor.

Evaluation Board Layout

Figure 1 to Figure 4 are RTQ2522A Evaluation Board layout. This board is constructed on four-layer PCB, outer layers with 1 oz. Cu and inner layers with 1 oz. Cu.
